Re: Franklin County
Columbus
MCQ, Inc., proposed sanitary landfill

Mr. Don I Craven
City Engineer
City of Upper Arlington
3600 Tremont Road
Columbus, Ohio 43221

John J. Gilligan
Governor
Dr. Ira L. Whitman
Director

Dear Mr. Craven:

You recently requested of Mr. Don Day that this agency supply you with a listing of information necessary for our staff to review a proposed sanitary landfill located in Marble Cliff Quarries. The proposed site is on the south side of Trabue Road, east of McKinley Avenue and presently contains quantities of "flume sand."

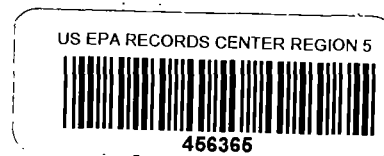

You have received a copy of the geologists' report along with a statement that we can not recommend approval of the site at this time. In discussions with you it has been suggested that the flume sand might be used to seal the area in such a manner as to prevent ground waters from entering the area and also to prevent anticipated leachate from polluting waters of the state. This would require more information about the flume sand permeability and a knowledge of total sand depth and additional quantities available. Information on a leachate collection and disposal system would also be required.

Our staff, after lengthy discussions, feels that it would be very difficult to comment upon verbal proposals and therefore almost impossible to list needed information. It is suggested that you might arrange to meet with our staff members, in our offices. Tom Rusnak, 466-6450, can make necessary arrangements, if this is what you wish. All concerned persons could be present.

Yours truly,

Robert P. Carey /oo
